

ABSTRACT

Disclosed is a novel compound suitable as an electron transporting material for organic electronic devices.

5 Also disclosed is an organic electronic device using such a compound which has higher sensitivity and longer life than conventional organic electronic devices.

Specifically disclosed is a compound having a structure wherein structural units represented by the general

10 formula (1) below are bonded to one another without a linking group,

(1)

wherein, in the formula, X_1 to X_4 independently represent an oxygen atom, a sulfur atom or NR_0 (wherein R_0 represents
 15 a hydrogen atom, or a substituted or unsubstituted monovalent organic group); Z_0 represents a tetravalent organic group; and $*$ represents a bonding position.
